CP Mobile Express: Hosting Options

1. Hosted internally on local *private* network

- Mobile devices connect to your local CP server.
- Users download and upload data ONLY AT THE OFFICE.
- Save and email orders from anywhere.
- Highly secure and affordable.

2. Hosted internally on local *public* network

- Opens up your local network firewall so that mobile devices connect to your local CP server from anywhere.
- Affordable, but poses a security risk.

3. Hosted internally on local private network with *VPN access*

- Mobile devices connect to your local CP server from anywhere via a *virtual private network*.
- Highly secure, affordable option.
- Requires VPN knowledge.

4. Hosted externally using a *virtual private server*

- Local CP server pushes data to remote host.
- Mobile devices sync with remote host.
- Remote-Local syncing occurs at scheduled times and/or on demand.
- Secure hosting provided by a third party.
- Requires MySQL setup.

* Our mobile apps require an Apache web server that runs the CompuPlants CGI program and scripts. The apps interface with your Platinum ® database through the CP Mobile Express module, which will be integrated with your existing desktop application.
